Summary

Engineer and builder with a foundation in Computer Science & Business Systems — shipping production AI pipelines, development tooling and full-stack applications. Active open-source contributor, FOSS community speaker, and IEEE student leader with a track record of taking ideas from zero to deployed

Education

KPR Institute of Engineering and Technology

Bachelor of Technology in Computer Science and Business Systems

- Honours in Cloud Computing

Sep. 2023 – May 2027

Coimbatore, Tamil Nadu

CGPA: 8.22/10

Experience

Finsight Analytics LLP

Machine Learning Intern

January 2025 – April 2025

Coimbatore, Tamil Nadu

- Built machine learning pipelines on financial datasets, improving forecast accuracy through feature engineering and model tuning
- Designed a retrieval-augmented generation system for legal query resolution across CGST and Income Tax Act documents

Projects

ProcureX | *Python, FastAPI, AWS Strands, Gemini 2.5 Flash, ChromaDB, React*

- Built a **4-agent autonomous pipeline** that analyzes any Indian government tender end-to-end with PDF ingestion to actionable bid strategy using AWS Strands, Gemini 2.5 Flash via **LiteLLM**, with eligibility scoring and market intelligence agents
- Agents handle Requirements Extraction via RAG, Eligibility Scoring, Market Intelligence, and Bid Strategy synthesis against a configurable company profile
- Deployed on Vercel and Render with production guardrails, UptimeRobot monitoring, and versioned releases at **v1.2.0**

BoxMachiBox | *Python, XGBoost, FastAPI, Next.js, Render, Vercel*

- F1 podium prediction system using **XGBoost** trained on 1,558 race samples, achieving **93.89% accuracy** on real unseen race data validated against the 2025 R21–R24 test set
- Engineered **47 features** across qualifying, driver momentum, constructor strength, and circuit-specific factors to model real-world race dynamics
- Deployed FastAPI backend on Render with Swagger docs and Next.js frontend with live 2025 championship standings

Heimdall MCP Server | *TypeScript, Bun, MCP SDK, React, Vite, Tailwind, Vercel*

- Built a **Model Context Protocol server** bridging Claude AI with macOS, enabling natural language system control through **33 tools** across 6 categories via AppleScript and native APIs
- Shipped as a full monorepo with React + Vite landing page, interactive command playground, and comprehensive documentation
- Published open-source under MIT license and listed on **mcpservers.org** with live GitHub stats integration

Technical Skills

Languages: Java, TypeScript, Python, SQL

AI/ML: XGBoost, scikit-learn, RAG, Agentic AI, ChromaDB, AWS Strands, Gemini, LiteLLM

Frameworks: FastAPI, React, Next.js, Vite, Tailwind CSS, Bun, MCP SDK

Tools & Platforms: Github, Docker, Vercel, Render, Firebase, Google Cloud, VS Code

Leadership & Volunteering

Joint Treasurer & Head of Media – IEEE KPRIET Student Branch

July 2024 – Present

Lead Organizer, Treasury & Partnerships – HackXelerate'25

February - April 2025

Google Student Ambassador & Crowdsourcing Contributor

August 2025 – Present

FOSS Speaker & Contributor – FOSS United Community, Coimbatore

December 2025 - Present

Achievements

1st Place – Paper Presentation, MXCEL'23, Kongu Engineering College

2023

3rd Place – Idea Ignite, Krishnecs'24, Sri Krishna College of Engineering & Technology

2024

1st Place – Robo Evade, Prodothon'25, PSG Institute of Technology

2025

3rd Place – Hackfest'25, Chettinad College of Engineering & Technology

2025
